

## Overview of AI concepts in Module 1

User: Can you give me an overview of what we will learn in module 1.

Chatbot: In Module 1, we will delve into the fundamental concepts of AI, starting with the importance of data in AI applications. We will then explore different models used in AI, the role of objective functions, and the process of optimization. Additionally, we will discuss the significance of starting with the right parameters when training AI models and the importance of robustness in AI systems. Finally, we will touch on the evolution and revolution of AI, as well as the general recipe for approaching AI problems.
